

# Nasal COVID Swabs with Nanoparticles Cause Brain Damage!

Published on

Written by John O'Sullivan

In a follow up to our [December article](#) that PCR swabs may be contaminated with dangerous nanoparticles is this study from Trinity College, Dublin which affirms that nanoparticles alter DNA and cause brain damage.

The study appears in the popular journal, [Nature](#). We urge readers to exercise extreme caution over nasal swabbing. The practice offers no added benefit, but does present higher risk of harm.

This compelling peer-reviewed study from the prestigious international science journal will add to concerns that PCR nasal swabs (nasopharyngeal swab) are unsafe, while other evidence shown below proves nasal swabs offer no extra value in COVID19 virus testing.

Key cause of concern is that the intrusive long swabs make contact with the delicate cellular barrier at the top of the nasal passage in close proximity to the brain. This is precisely the site which may be compromised by metal nanoparticles referred to in the Dublin study.

When these nanoparticles enter the brain their cellular messengers are released and may cause damage to the DNA of developing brain cells.

## Nanoparticle-induced neuronal toxicity across placental barriers is mediated by autophagy and dependent on astrocytes

A write up on the study from Ireland by [sciencedaily.com](https://www.sciencedaily.com) tells us:

“Nanoparticles are very small particles of between 1-100 nanometres in size. They are being increasingly used in drug delivery, chemotherapy, imaging and diagnostics due to their ability to travel within organisms by utilising cellular pathways. During their interactions with cell membranes and internalisation into cells, key signalling pathways and processes are altered. In addition to affecting the health of directly exposed cells, the internalisation of nanoparticles can also detrimentally affect neighbouring cells in a manner similar to the radiation-induced bystander effect.” [1]

We first drew wider attention to the possible insidious purpose to these nasal swabs -a completely unnecessary procedure when every law enforcement authority and doctor knows oral swabs are perfectly efficient at taking usable DNA samples- with our [December article](#). [2]

Below is a diagram showing the ‘recommended’ way and the wrong way to take a nasal swab as published in a [recent CDC document](#) related to COVID testing [3]:

As the study from Ireland shows, this is very much a delicate safety issue with unintended consequence inherent with swabbing internally so close to the blood-brain barrier. The sciendaily.com article continues:

“The scientists demonstrated that cells in the barriers, processed the nanoparticles by a natural cellular pathway, known as autophagy, leading to those cells generating signaling molecules. These signaling molecules caused DNA damage to the brain cells astrocytes and neurons; this was confirmed as when either autophagy or IL-6 (main cell messenger identified) was blocked, the amount of DNA damage was reduced. These findings support the idea that indirect effects of nanoparticles on cells which is the case in this study might be as important to consider as their direct effects when evaluating their safety.”

So-called ‘experts’ have falsely claimed the nasal swab poses no risk, as ludicrously claimed in this example ‘[Can nose swab testing for COVID-19 be harmful?](#)’ It claims:

“It is virtually impossible for swab testing to access or have any impact on the blood-brain barrier.”

The sham ‘expert’ in this criminally [misleading web post](#) attempts to fool readers into believing the nasal swab is ‘standard practice’ for obtaining ‘secretions’ but astutely avoids mention of the term ‘DNA’ because the authors know full well a standard oral swab is perfectly adequate in collecting ‘secretions’ which contain DNA, as anyone undergoing a police forensic mouth swab test can affirm.

But DNA testing is now commonly used to measure a person’s risk level for developing certain types of cancer, determine who someone’s father is, and to research a person’s family history. It can even be used on dogs to determine their breed and level of health.

Above, a graphic from [yourdna.com](#)

which tells what what you already suspected, there is no need to do a nasal swab to collect a DNA sample. The website tells us more about the very common procedure of testing your DNA:

## How DNA Testing Is Done (The Process)

**Because DNA is found in all of your cells, extraction is available in multiple forms.**

Lab techs can use your saliva, blood, hair, and nails to test your DNA. However, at-home DNA test kits use a cheek swab or saliva collection to keep the process simple.

The part of the process that you experience is easy. All you have to do is submit a sample for testing. This is usually a sample of your saliva or blood.

However, because DNA is in all of your body's cells, it can be extracted from your hair, nails, teeth, and skin too. But for the most part, saliva or blood samples are used because they are easier to extract the DNA from and have all the markers needed for the testing process.

But even those scientists specifically involved in detecting this elusive pandemic virus will tell you....

**there is nothing uniquely useful about obtaining DNA via a nasal swab.**

One recent peer-reviewed study performed during the pandemic, found that there is no benefit to nasal swabbing in low risk cases. [4]

Moreover, even the CDC recommends equally the use of oral and nasal swabbing [5] while other studies reported that SARS-CoV-2 detection was similar among oral fluid and nasal swab specimens when compared to nasopharyngeal swabs specimens. [6, 7]

But behind all this PCR testing nonsense remains the inescapable scientific fact that no swab – be it administered via the nose or the mouth – can be an effective tool in detecting a virus. We know this because there is ample data proving:

**(a) the PCR test is merely a [replication test](#); and**

**(b) [no lab has yet isolated the SARS-COV-2 virus](#), the alleged cause of COVID19.**

As the [National Human Genome Research Institute](#) tells us:

“Sometimes called “molecular photocopying,” the polymerase chain reaction (PCR) is a fast and inexpensive technique used to “amplify” – copy – small segments of DNA. Because significant amounts of a sample of DNA are necessary for molecular and genetic analyses, studies of isolated pieces of DNA are nearly impossible without PCR amplification.” [8]

In short, the PCR swabs are not fit for purpose, they do NOT detect infection by COVID19 and this renders the whole exercise of swab testing as pointless from a detection and clinical identification viewpoint. However, it may make perfect sense if the actual (hidden) purpose of the nasal swab was to insidiously infect and harm the patient with nanotechnological devices for personal tracking, uninformed vaccination and population control.

Even the iconic [Anthony Fauci admits](#) that the chances of getting accurate results from COVID PCR tests are ‘miniscule.’

This is not just a science farce, it is probably the biggest crime against humanity – likely to dwarf both world wars – if the eugenicist plan to [cull 90 percent of us](#) becomes apocalyptic reality.

# Johns Hopkins University confirms: You can be vaccinated with a PCR test, even without knowing

by [GreatReject](#) · 18/02/2021

**In January 2019, the WHO defined the growing number of vaccination critics as one of the top ten threats to global health, and since the unprecedented Corona vaccination fiasco, the number of vaccination refusers has truly multiplied.**

**Meanwhile, resistance is forming even within the orthodox medical establishment. But the masterminds of the WHO continue to insist on an unrealistic vaccination coverage rate of at least 70 percent.**

In this article, Jan Walter describes, with extensive source citations, which techniques are possible to still vaccinate the population, when people are becoming increasingly critical of vaccinations. This is only fueled by the continuing pressure for mass “vaccination” against a non-lethal disease for 99.8% of people, with a new type of “vaccine” that is actually gene therapy by means of mRNA. It seems like science fiction and is chilling, but the methods and techniques are available. The question is how far do we let it get?

## **Vaccinations increasingly scrutinized and the chilling alternative**

In January 2019, [WHO](#) [1] defined the growing number of vaccine critics as one of the ten greatest threats to global health, and since the unprecedented corona vaccination [fiasco](#) [2], the number of vaccine refusers has really multiplied. Meanwhile, resistance is emerging even within the conventional medical community. But the masterminds at WHO continue to insist on an unrealistic vaccination rate of at least 70 percent.

Now several experts and former mainstream journalists like John O’Sullivan are warning that the massive PCR testing campaign could be a WHO vaccination program in disguise. (see [Principia Scientific](#)) [3] O’Sullivan is referring to a new technology developed at Johns Hopkins University that is supposed to make it possible to carry out covert vaccinations through a PCR test. (See [Johns Hopkins University](#)) [4]

*Inspired by a parasitic worm that digs its sharp teeth into the intestines of its host, Johns Hopkins researchers have developed tiny, star-shaped micro-devices that attach to the intestinal mucosa and can deliver drugs into the body.*

These tiny devices, known as “Theragrippers,” are made of metal and a thin film that changes shape. They are covered with heat-sensitive kerosene wax and each no larger than a dust particle. (See Figure 1)

When an open theragripper, left, is exposed to internal body temperatures, it closes on the instestinal wall. In the gripper's center is a space for a small dose of a drug.

When the kerosene coating on the Theragripper reaches body temperature, the devices close autonomously and clamp onto the wall of the colon. Because of the sealing action, the tiny, six-pointed devices burrow into the mucosa and attach to the colon, where they are held and gradually release their drug load to the body. Eventually, the Theragripper lose their grip on the tissue and are removed from the colon through normal gastrointestinal muscle function.

**Note:** According to Johns Hopkins University, Theragrippers are actually administered with a cotton swab. (see Figure 2)

A theragripper is about the size of a speck of dust. This swab contains dozens of the tiny devices.

Figure 2: Theragrippers on a cotton swab

The Johns Hopkins University research team published positive results from an animal study as a [cover article](#) in Science Advances on October 28, 2020 [5], confirming that the new technology works flawlessly:

*Here we report that GI parasite-inspired active mechanochemical therapeutic grabs, or theragrippers, can survive 24 hours in the gastrointestinal tract of live animals by autonomously adhering to mucosal tissue. We also observe a remarkable six-fold increase in elimination half-life when using ripper-mediated delivery of the model analgesic ketorolac tromethamine. These results provide excellent evidence that shape-shifting and self-locking microdevices improve the effectiveness of long-term drug delivery.*

Fig.3: Shape-shifting Theragripper as self-locking drug delivery devices

Coincidentally, the PCR test in China is now also performed anally because the reliability of the results is said to be better and of course this practice is immediately supported in the Western mainstream media. (See [Business Insider](#)) [6]

Note: If you can't imagine the government administering toxins to you against your will and without your consent, think of all the horrific experiments on humans that were admitted afterwards and which, according to [Wikipedia](#), [7] have continued well into modern times. In 2007, the CDC [8] even admitted that between 1955 and 1963, 10-30 million citizens were infected with the carcinogen SV40 via polio vaccination.

### **The Vaccination that is Not a Vaccination, but Gene Therapy**

In a revealing [video conference](#) [9] with Dr. Judy Mikovits, Robert Kennedy Jr. and Dr. David Martin, it is explained that the mRNA vaccine, by the legal definition, is not a vaccine at all. It is

falsely called a vaccine to hide the fact that the purported vaccine is, in fact, a gene therapy. Experienced physician and epidemiologist, Dr. Wolfgang Wodarg, stated in a censored [interview](#) with Rubikon, “Actually, this ‘promising’ vaccine should be PROHIBITED for the vast majority of people because it is genetic engineering!” Mary Holland, Vice President and Chief Advocate of the Children’s Health Defense Organization, warns, “New vaccine technologies will likely lead to new types of vaccine harms. Since there has never been an approved mRNA vaccine, we really don’t know what such damage will look like. Because vaccines have been developed so quickly and clinical trials are so short, the long-term damage is completely unknown.”

What is particularly chilling is that the vast majority do not even know what the mRNA vaccine is doing in their bodies. They simply allow themselves to be blindly vaccinated, and this despite the fact that more and more independent and even orthodox medical experts are warning against it. (See doctors from around the world [warn against](#) mRNA vaccination) [10] In this context, it should not be forgotten that the American company modeRNA Therapeutics was founded in 2010 not as a vaccine manufacturer, but as a GenTech company. The example of the many Monsanto scandals makes it crystal clear that genetic engineering does not serve to protect species, but rather to gain power. The hidden agenda is to genetically modify species in order to patent or own them. Former U.S. Secretary of State Henry Kissinger once said, “Whoever controls the seed controls the world.” (See Press Portal) [11]

### **What’s next? Are they going to patent our bodies after they genetically engineer us with the mRNA vaccine?**

[Dr. Carrie Madej](#), [12] a specialist in internal medicine with over 19 years of experience, states that the COVID-19 vaccine could actually be a Trojan horse to patent humans because it alters our DNA. According to an Article published in the British science journal Phys.org in January 2020 [13], it is confirmed that modified RNA has a direct impact on our DNA. The following passage is particularly alarming: “Several research groups are now working together to investigate what effect this may have on the DNA molecule. We already know that R-loop regions are associated with DNA sequences that contain active genes, and that this can lead to chromosome breaks and the loss of genetic information.” Also alarming is the fact that leading vaccine manufacturers such as Pfizer are warning their subjects not to reproduce after vaccination (see [Pfizer, p. 132](#)) [14 PDF] By doing so, the pharmaceutical company is confirming that the mRNA vaccine can have negative effects on human reproduction and is being vaccinated in spite of it!

Conclusion: Anyone who knows a little history knows that **genetic experimentation** and **human experimentation** are nothing new. Although modern **eugenics** has its origins in the 19th century, the ideas, measures and justifications of state and social interventions and influences on reproduction have been known since ancient times. They can already be found in Plato’s “Politeia,” which, however, is limited to state selection and education. In the Renaissance, corresponding lines of thought can be found in the social utopian writings “Utopia” by Thomas Morus, “Nova Atlantis” by Francis Bacon and “La città del Sole” by Tommaso Campanella. But because common sense instinctively resists such interventions, the establishment has always endeavored to disguise its true intentions with misleading labels. The Nazis, for example, disguised eugenics as “hereditary health science” or “hereditary care” to make it attractive to the masses, and today the same sick agenda is sold to us with a new “vaccine” to save us from a supposed “pandemic”.

## Intro

**Important:** besides the devastating health risks of nose swabs, know [a nose swab can be used to vaccinate](#). Looking at the completely clandestine nature of the scandemic, careful consideration is recommended before doing a test.

Besides the by now well known culprit of **ethylene oxide** (EO, EtO) being used to sterilize swabs, which is a highly **carcinogenic** agent, and the obvious **disturbance inside the nasal cavity** due to swabbing, there's a lot more disturbing information in regard to swabs.

## Synopsis

Italian scientist [Antonietta Gatti](#) shows electron microscopy pictures from swabs and an analysis of the chemical components. **Harmful chemicals** were found like aluminium, zirconium, glass fiber and silver nanoparticles.

She concludes the flocked swabs are **designed so the needles break off in the nasal cavity** slime (mucosa) where they stay and cause all kinds of health damage.

UK [doctor T](#) demonstrates 100x microscopy pictures and video. She found **strange structures on needle heads** of the flocked swabs. She also recorded a moving transparent blob on a mask which disappeared into the glue of the mask.

Finally, Tim Truth covers the mysterious Slovakian study which states the swab needles are hollow and filled with hydrogel. The scientist shows pictures of hydrogel growing in saliva in vitro, where it formed fractal shapes making them convinced the structures serve as fractal antennas.

The PDF is mysterious because for all I know, it was originally posted on [golokaproject.org](#), a new age website. The scientists allegedly work in a hospital in Bratislava. Yet, the PDF presents the most detailed electron microscopy to date while pointing directly to the little understood subject of hydrogel.

# Labonderzoek: coronasneltest bevat 7 keer toegestane hoeveelheid ethyleenoxide, een giftige stof

in [Buitenland](#) 30 oktober 2021 06:00 [79 Reacties](#)

Enkele dagen geleden zond het mediakanaal Pronews TV een item uit over te hoge concentraties ethyleenoxide in teststaafjes die worden gebruikt voor coronasneltests. Een staafje, dat is onderzocht in een laboratorium op Cyprus, bleek meer dan zeven keer de toegestane hoeveelheid ethyleenoxide, een giftige stof, te bevatten.

De stof wordt onder meer gebruikt om teststaafjes voor testkits en de [PCR-test](#) te steriliseren. In de EU mogen levensmiddelen geen ethyleenoxide bevatten. De maximaal toegestane hoeveelheid is vastgesteld op 0,05 mg/kg. In het teststaafje, dat is geanalyseerd door een lab in de stad Larnaca, zat 0,36 mg/kg ethyleenoxide, schrijft de [Cyprus Mail](#).

## Voedingsmiddelen terugroepen

In augustus werden bepaalde voedingsmiddelen teruggeroepen omdat ze sporen van ethyleenoxide bleken te bevatten. Volgens de gezondheidsautoriteiten ging het om kleine hoeveelheden die geen direct gevaar vormden voor de volksgezondheid.

Ze voegden er wel aan toe dat wetenschappelijk onderzoek heeft aangetoond dat als je vaak en langdurig grote hoeveelheden van deze stof binnenkrijgt, er tumoren kunnen ontstaan.

## Giftig, kankerverwekkend en mutageen

De Cypriotische vakbond Isotita heeft opgeroepen het gebruik van sneltests op te schorten. Duizenden Cyprioten moeten elke 72 uur een sneltest afnemen om te kunnen werken.

De vakbond heeft gezegd dat het gebruik van de sneltests moet worden gestaakt tot de gezondheidsautoriteiten de zaak hebben onderzocht. De vakbond verwees naar het Europees Agentschap voor chemische stoffen, dat aangeeft dat de stof giftig, kankerverwekkend en mutageen is.

Het ministerie van Volksgezondheid heeft [een onderzoek ingesteld](#). Niet naar de sneltests, maar naar het lab.

<https://www.rivm.nl/nanotechnologie/consumentenproducten/Zijn-niet-medische-mondkapjes-met-nanomaterialen-veilig>

In niet-medische mondkapjes kunnen heel kleine deeltjes van chemische materialen (nanomaterialen) zitten. Deze voegt een fabrikant toe om verschillende redenen. Zo zouden ze bijvoorbeeld helpen om het mondkapje beter schoon te houden. Het is nog niet duidelijk of dat ook zo is. Ook is niet bekend of deze mondkapjes met nanomaterialen wel veilig zijn voor mens en milieu.

Er bestaan veel verschillende soorten mondkapjes. Je kunt ze onderverdelen in medische mondkapjes en [niet-medische mondkapjes](#). Medische mondkapjes zijn mondmaskers zoals een chirurgisch mondmasker van het type IIR en zijn geschikt voor gebruik in de zorg. Niet-medische mondkapjes zijn geschikt voor gebruik door consumenten en kun je bij veel winkels kopen. Je kunt dan vaak kiezen uit wegwerpmondkapjes voor eenmalig gebruik. En uit mondkapjes van textiel die je kunt wassen en hergebruiken.

## **Waarom worden nanomaterialen aan mondkapjes toegevoegd?**

Fabrikanten van niet-medische wegwerpmondkapjes voegen nanomaterialen toe om verschillende redenen. Zo claimen zij dat nanomaterialen een antibacterieel of antiviraal (desinfecterend) effect hebben, beter filteren, of een combinatie daarvan. Er zijn mondkapjes met (combinaties van) nanodeeltjes van zilver, koper, zink, grafeen of synthetische vezels.

Er is nauwelijks wetenschappelijk bewijs voor de positieve effecten die de nanomaterialen in de mondkapjes zouden hebben. Van sommige nanodeeltjes van bijvoorbeeld koper en zilver, is wel bekend dat ze een antiviraal effect kunnen hebben. Maar of dit ook zo is als ze in een mondkapje zitten, is niet bekend.

## **Vormen nanomaterialen in mondkapjes een risico voor de gezondheid of het milieu?**

Van sommige nanomaterialen die in mondkapjes voorkomen is wel bekend dat ze schadelijk kunnen zijn voor mens of milieu. Wat nog niet bekend is of nanomaterialen vrijkomen uit mondkapjes. Als dat het geval is, kunnen mensen ze inademen tijdens het dragen van het mondkapje. Of ze kunnen via de huid of de mond in het lichaam komen. Verder zullen nanomaterialen ook in het milieu terecht komen als je de mondkapjes wast of weggooit.

In België doet Sciensano onderzoek naar de veiligheid van nanomaterialen in mondkapjes. Vanwege een gelekt, tussentijds [onderzoeksrapport](#) heeft de Belgische overheid de bevolking recentelijk [uit voorzorg afgeraden](#) om voorlopig de gratis verstrekte witte stoffen mondkapjes nog te gebruiken. Dit omdat ze nanodeeltjes van zilver en titaniumdioxide bevatten die mogelijk schadelijk zijn voor de gezondheid. Of er daadwerkelijk een risico is voor de volksgezondheid wordt momenteel [verder onderzocht](#). Het Rijksinstituut voor Volksgezondheid en Milieu zal hierbij assisteren. Voor zover nu bekend is dit specifieke mondkapje niet in Nederland verkrijgbaar, maar wel vergelijkbare mondkapjes met nanozilver. Bol.com heeft recentelijk [besloten](#) een mondkapje met nanozilver offline te halen.

## **Aandacht van Europese gezondheids- en milieuorganisaties**

Een aantal Europese gezondheids- en milieuorganisaties maakt zich zorgen over de mogelijk nadelige effecten voor mens en milieu, door het gebruik van nanomaterialen in niet-medische mondkapjes. Zij hebben hierover [een brief](#) geschreven aan de directeur van het Europees chemische stoffen agentschap European Chemicals Agency. Hierin vragen zij ook aandacht voor het toevoegen van steeds meer desinfectiemiddelen ([biociden](#)) aan mondkapjes van textiel. Ze vragen zich af of dit meerwaarde heeft vergeleken met normaal schoonmaken en desinfecteren. Desinfectiemiddelen kunnen nadelige invloed hebben op de gezondheid en het milieu. De vraag is of de regelgeving de veiligheid van deze producten voldoende garandeert.

Het Duitse Bundesinstitut für Risikobewertung ( Federal Institute for Risk Assessment) raadt het gebruik van nanodeeltjes zilver in mondkapjes af. Ook het Franse Agence nationale de sécurité sanitaire de l'alimentation, de l'environnement et du travail ([ANSES](#)) is kritisch over het gebruik van mondkapjes met nanozilver.

## **Wat vindt het RIVM?**

Op de Nederlandse markt zijn diverse mondkapjes met nanomaterialen aangetroffen. Het RIVM kan niet met zekerheid zeggen of deze veilig zijn voor mens en milieu. Er is nog geen onderzoek afgerond waarin gekeken is of bij het dagelijks gebruik van niet-medische mondkapjes of tijdens de verwerking tot afval, nanomaterialen vrijkomen. In België hebben de eerste onderzoeksresultaten geleid tot het afraden van het gebruik van 1 type stoffen mondkapje met nanozilver. Er zullen ook andere mondkapjes met nanozilver in de studie meegenomen worden. Voor een definitief oordeel of de onderzochte mondkapjes veilig zijn, zal het onderzoek in België verder afgerond moeten zijn. Het RIVM is hierbij betrokken. Verder deelt het RIVM de genoemde zorgen van de internationale organisaties.

# Analysis of test sticks from surface testing in the Slovak Republic – confirmation of genocide

[admin](#) Comments [23 comments](#)

key words – 1) nylon, 2) Darpa Hydrogel, 3) lithium, 4) pineal gland

The analysis was performed in the months November 2020 to March 2021 on test sticks in sets. SD Biosensor, Abbott and Nadal in an unnamed hospital laboratory from Bratislava, Slovakia. The test swabs were from the sets used in surface testing in Slovakia and in hospitals.

Anyone who has at least a standard school microscope and a test microscope can verify the information regarding the test swabs published here. All information about test swabs, Darpa Hydrogels, and lithium is publicly available in scientific and corporate work. Links to some are at the end of the document.

From this information it is clear that test sticks are a criminal tool of genocide in the population of Slovakia. This is a worldwide, thoughtful and carefully prepared event.

Figure 1 and 2 Nylon hollow fibers at the broken end of test swabs.

Figure 3. For comparison, a picture of a classic cotton wool under a microscope.

Figure 4 and 5 Broken-shaped ends – their task is to disrupt the epithelium (surface layer) on the mucosa, thereby also their breakage and subsequent leaching of the fiber content – Darpa Hydrogel and Lithium. The threads are patented [by Darpa].

Figure 6 Longitudinally open fiber with broken end and Darpa Hydrogel content balls.

Figure 7. On the slide, after mechanical manipulation, which is identical to the swab nasopharyngeal material that contains crushed nylon fibers, hydrogel and lithium. This material remains in the nasopharynx after spawning.

Figure 8 and 9. Darpa Hydrogel beads that form the content of hollow nylon fibers.

Figure 10 to 11. After contact of the Darpa Hydrogel with organic fluids (e.g., saliva), within a few minutes they begin to form rectangular crystal structures. These gradually grow in a fractal manner.

Figure 12.

Figure 12. Result of crystallization after 24 hours.

Figure 13. These Darpa Hydrogel Crystals create a 3D spatial structure and grow through the tissues.

Figure 14. Darpa Hydrogel Crystals grow under the microscope in the direction of the magnetic field. In the human nasopharynx after swabs grow towards the pineal gland. The pineal gland creates a locally stronger magnetic field than the Earth 's external magnetic field.

Figure 15 and 16. Natural crystallization of saliva without Darpa Hydrogel. Crystals do not create 3D spatial models and do not even form rectangular structures and do not grow in a fractal way.

Figure 17 3D. Darpa Hydrogel Crystals. To this was added human saliva with antibodies on the left and then on the right ivermectin. see Figures 18 and 19.

Figure 18. Effect of saliva of a human who overcame COVID naturally and has antibodies. Such saliva was added to the left side of the structures in Figure 17 and came almost immediately to the permanent disintegration of Darpa Hydrogel Crystal structures.

Figure 19. Ivermectin was added to the right side of the structures in Figure 17 and occurred immediately to the complete and permanent disappearance of the Darpa Hydrogel Crystal structures. This clearly shows what Ivermectin has an incredibly strong effect against what makes Darpa Hydrogel in our organisms.

The effect of Darpa Hydrogel on human blood cells.

Figure 20. Normal live red blood cells.

Figure 21. Addition of Darpa Hydrogel from the test rod resulted in total massacre of red blood cells.

Figure 22. Darpa Hydrogel forms blood clots within a few seconds. These subsequently damage and clog blood vessels.

## **Summary:**

**After spawning a mixture of nylon fiber fragments, Darpa Hydrogel remains on the nasal mucosa under the pituitary and pineal gland along with lithium. This mixture immediately reacts with living structures to form crystals that are directionally oriented to the pineal gland, which has its own electromagnetic field. The shape of the crystals determines the type of hydrogel used. The crystals are conductive due to the lithium contained in it. The crystals can receive the signal from the transmitter to the cell and transmit signals from the cell to the transmitter. These are actually nano-antennas.**

**Lithium is an element (reference to Li) that does not occur naturally in humans. It is highly toxic to the pineal gland influence. In low doses it blocks it and in higher doses it can completely destroy it. Aluminum and mercury also have toxic effects on the pineal gland, which are widely used in vaccines. The pineal gland produces serotonin (a hormone of happiness) and controls human biorhythms. It is crucial for higher brain activity (creativity, foresight, sixth sense, etc.) and for social interactions of man. More details in reference (5) grasshoppers.**

**Darpa Hydrogel (reference) is an artificial substance that creates a converter between the electromagnetic signal and living cell, tissue and organ. Converts an electromagnetic signal from a transmitter to a signal which a living cell understands and responds to. (see photo of beetle – Darpa Hydrogel was injected into this nerve structures and was controllable via a radio).**

**Darpa Hydrogel and lithium block and destroy the pineal gland and cause the thinking person to become a controllable biorobot. A hydrogel is a carrier of an active substance, its task is to get the substance into the body at a pre-desired place.**

**Briefly on the issue of vaccines. Vaccines contain Darpa Hydrogel, lithium and patented genetic information. mRNA is not an untested novelty. In breeding and for top athletes, this type has been using doping for many years. For top athletes 4), this doping significantly shortens the life.**

**Genetic information in the vaccine leads to the creation of a patented mutant. The dream of the dark forces around Bill Gates is to achieve to force these mutants, for example by vaccination, to regularly upgrade as a computer program.**

**P.S.:**

**Darpa Hydrogel hollow nylon fibers fill the FFP2 class plastic respirators. This Darpa Hydrogel with additives is slowly released from the respirators. When breathing, it enters the human airways.**

**The swabs used for PCR are also composed of hollow nylon fibers with Darpa Hydrogel.**

**DARPA**

**The Defense Advanced Research Projects Agency is a research and development agency of the United States Department of Defense responsible for the development of emerging technologies for use by the military. Originally known as the Advanced Research Projects Agency, the agency was created on February 7, 1958 by President Dwight D. Eisenhower, USA**
